

## Introduction

- Working at **Azorpay** → AzorpayX Engagement Team
- Previously worked at Samsung Research → **Contacts Application**.
- Graduate from Thapar University 2019 batch
- Total 4+ years of work experience. 3+ years of experience in mentoring and teaching

→ Currently, I work at **Booking.com** as a **Senior Software Engineer** Amsterdam.

**\* Feel free to reach out to me → Slack, WhatsApp, LinkedIn**

Mobile :- +91- 8195910238

Email:- singh.alok-1@scaler.com

→ Career } → Calendly link → Will share.  
→ Jobs  
→ Learning

→ WhatsApp Group.

→ LinkedIn

My classes will be around  $\approx 2$  hours.  
↓  
9:30 hours

## 2nd Module

In DBMS, we are going to cover SQL.

First half → Theory

Second half → Practical.

## Ground Rules.

- 1) Ask Questions in public chat.
- 2) Make it collaborative and engaging.
- 3) Answer questions and help your batchmates.

## 9 classes

- 1) Introduction to DBMS.
- 2) Schema Design 1
- 3) Schema Design 2
- 4) CRUD
- 5) Joins
- 6) Aggregates and Built-in functions.
- 7) Indexing
- 8) Transactions (ACID properties)
- 9) SQL subqueries and Views. (Advanced SQL)

## Intro to DBMS and SQL

### Database Management system

#### What is Data?

Any information about something

#### Scaler's Software System

- Students
- Mentors
- Instructors
- Jobs
- Classes you attend
- Questions.
- Assignments
  - PSP
  - Avg. time to completion
  - Are students enjoying assignments or not

#### Airbase ?

Place where aircraft are stored.

Database is somewhere we store data

Collection of Related data

## Leader DB

Students

Mentors

Assignments

Questions

We might have different DB for different type of data.  
like, Analytics DB

Factors to decide which dB. → usecase

MySQL/MongoDB

Redshift/ BigTable  
(Optimised for Analytical Queries)

Technical Architecture → Microservices.

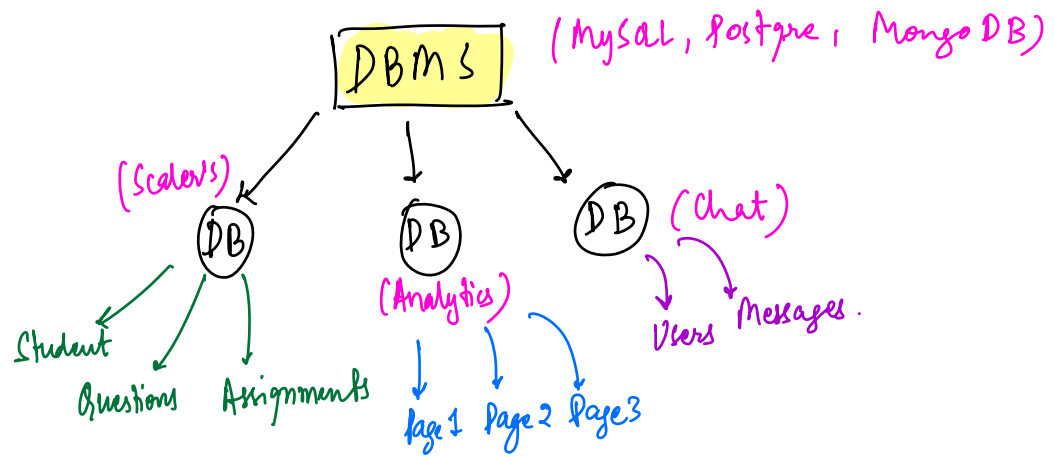

Payments  
PaymentDB

Accommodations  
AccoDB

Flights.  
FlightDB

→ Monolith Architecture  
BookingDB

DBMS → Way/Software that is used to manage databases.  
Workbench → We will use.

Break → 10:30 PM

## Types of DBMS-

Javascript, Python,  
Java,

C/C++

Backend → LLD.

Full Stack Backend.

Expert in Frontend  
Know Backend

Can this serve as a DBMS? → Yes.

The very first DBMS was a File Based DBMS.

What is a File Based DBMS?

→ Stores data as files on disk

There are multiple cons of this DBMS →

① Retrieval of data is not easy.

It is slow and inefficient.

② Forming Relation b/w files is difficult.

e.g. Student Assignment.txt

1) Adil	241	242	234
---------	-----	-----	-----

e.g. Assignment.txt

1) 241	L2D
2) 242	DSA
3) 234	H2D

③ There is possibility of errors.

e.g.

Students.txt

Get details about a student  
named → Nipun.

Problem  
→ Duplication of data

→ Now, maintaining consistency is a major problem.

4) Inconsistency / Duplication.

5) Security

6) No support for concurrency.

file is stored on a disk

## Next Class

- What is a dedicated DBMS
- SQL
- Primary Keys.
- Non-relational DBMS
- Relational Model.

Entry level

↳ DSA.

Schema Design. → LLD interviews.

Many companies like IBM, Oracle,

Walmart →
